REQUEST for Qualifications (RFQu)
Project No. 2024-02
Solid Waste Management On-Call Engineering Services

1. See question and answers below for information detailing evaluation criteria:

Question: Could additional information be provided in regards to the “designing layout for the final landfill phases” note under the “Anticipated upcoming major engineering design” section for Eastern Sanitary Landfill?

Answer: Design layout for final landfill phases involves responsibilities including but not limited to: Providing and updating Erosion and Sedimentation Control, Topography, Leachate Collection System Maintenance and Upgrades, and Final Cap and Cover.

Question: Per the Selection Criteria, it is understood that the proposal expectation is for the consultant to be clear on the relevant expertise that they offer and wish to be considered for award. Does this mean that more than one consultant could be selected for any given site to address all required services outlined within the RFQu? Or does it mean that the consultants will be awarded for similar services across all of the sites listed within the RFQu (i.e. groundwater monitoring across all the sites)?

Answer: The intent of this RFQu is to award consultants based on service needs at each site. Multiple consultants could perform different services at each site. For example, Consultant A might be selected to perform Groundwater monitoring at one site while Consultant B might be selected for civil design at the same site but groundwater monitoring at a different site.

Question: Is there a specific format that the County is expecting to receive to help delineate the services that can be offered by each respective consultant? For example, would a summary table outlining the tasks provided under the “Scope” section of the RFQu and denoting if the consultant can offer that service or not be acceptable? Or is the County looking for a summary table based on each site?

Answer: The County prefers that the Consultants provide a delineation of services based on tasks in the scope. Site-specific experience can be added as an additional row next to each scope item if desired.

Deadline for Submission has been updated from November 22, 2024 to December 3, 2024
